

Senior Operations Specialist- Task

Dear Interviewee,

As part of the hiring process, you are invited to complete the following business case.

The purpose of this exercise is to evaluate your ability to:

- Analyze operational data
- Identify performance issues
- Find possible root causes
- Prioritize operational actions
- Translate analysis into practical solutions
- Monitor results
- Communicate findings clearly

There is no single correct answer. We are interested in understanding how you approach the problem, interpret data, and translate findings into actions.

You have 3 days to complete the exercise and prepare a short presentation in English (PowerPoint, Google Slides, or PDF).

You may make reasonable assumptions whenever information is missing. Please state your assumptions clearly.

Business Context

Our company operates a large online food delivery platform connecting customers, restaurants, and marketplace bikers.

Delivery performance depends on having the right number of bikers in the right locations and ensuring that bikers reach restaurants on time.

One important operational KPI is Biker Arrival at Restaurant Time (BATR).

BATR measures the elapsed time between the order start time slot and the biker's arrival at the restaurant.

Management has recently observed an increase in BATR in several areas.

The operational target is: **> 90% of bikers should arrive at restaurants within 15 minutes of the start of the time slot.**

You are an Operations Specialist responsible for investigating the issue and supporting the Operations team in improving performance. **Operational data is provided separately.**

Task 1 — Understand the Problem

Before starting your analysis:

1. Explain how you understand the problem.
2. Define the 5 most important KPIs you would monitor.
3. Identify the main dimensions you would investigate, such as: city, zone, hour, day, restaurant, biker, order characteristics
4. Write at least 5 questions you would try to answer using the data.

Explain briefly why these questions are important.

Task 2 — Data Analysis

Analyze the provided dataset and identify important patterns related to BATR.

Your analysis should investigate, where relevant:

- Performance trend
- Differences between cities/zones
- Hourly performance
- Day-of-week patterns
- Supply and demand conditions
- Order volume
- Biker availability/utilization
- Distance
- Cost
- Restaurants or areas with unusually poor performance
- Other patterns you discover

Use charts or tables to support your findings. Do not simply present charts. For every important finding, explain: What happened → Where/when it happened → What may explain it

Identify at least 3 significant findings from the data.

Task 3 — Root Cause Analysis

Based on your analysis, identify the most likely causes of poor BATR performance.

Separate your findings into:

Evidence-supported causes

Root causes for which you found reasonable evidence in the provided data.

Hypotheses requiring further investigation

Possible explanations that cannot be confirmed using the available data.

For your top 3 suspected root causes, explain:

- Evidence supporting the hypothesis
- Operational mechanism behind it
- Additional information you would collect to confirm it

Task 4 — Operational Action Plan

Assume you are responsible for improving the worst-performing area identified in your analysis.

Recommend 3–5 practical actions.

For each action specify:

| Action | Problem Addressed | Expected Impact | Effort | Owner | Timing |

Prioritize the actions.

Explain which action you would implement first and why.

Task 5 — Operational Scenario

It is 8:00 PM on a busy day.

One major zone suddenly shows:

* Order volume: +30%

* Active bikers: -15%

BATR P90: 24 minutes

Cancellation rate: increasing

Biker cost per order: increasing

You are the Senior Operations Specialist on duty.

Explain:

1. What would you check first?
2. What actions would you take immediately?
3. Who would you communicate with?
4. What would you monitor during the next 60 minutes?
5. How would you determine whether your actions worked?

Be practical and prioritize your actions.
